Get the Most Out of Your SharePoint Investment

Our SharePoint® Health Check analyzes your SharePoint environment, to help ensure that your SharePoint aligns with Microsoft's recommended best practices, and our experience as Microsoft SharePoint Gold Partners. This engagement collects data regarding the most critical aspects of your SharePoint environment. These aspects include architecture, resources, databases, configuration, service pack levels, and SharePoint Server-related code.

Benefits from the SharePoint Health Check

The SharePoint health check provides complete documentation of your farm and suggestions to improve it or what the scope of work would be to migrate it to the cloud.

- Current health status of your SharePoint farm.
- Security, configuration and availability issues report
- Documentation of your current SharePoint Architecture
- Recommended resolutions for issues found that are out of compliance with Microsoft's best practices
- For cloud migrations we analyze the scope of work for a migration.

Key Features of the SharePoint Health Check

The Health Check provides your business documentation of your production environment:

- Deployment Configuration
- Customization, Search , Services, Features Deployed
- Performance
- Security
- Third-Party Software/Components

simplesharepoint

Phases of the SharePoint Server Health Check

- Discussion—Interview the SharePoint admin or governance team to discuss the intended use of SharePoint.
- Configuration analysis—Collect logs and config data.
- Performance—Collect data to obtain analysis of the current usage of SharePoint.
- Security —Verify the installation of critical Microsoft security patches; including Windows, SharePoint, SQL, etc

Part II: Data Analysis and Reporting

After completing the health check, the collected information is analyzed. SimplePortals will provide a report compiled with the findings, including the description of risks and recommended mitigation procedures. Further assistance can be scheduled for a later date to implement the suggested fixes. The report covers different aspects of the health of your SharePoint farm Servers, services, and SQL configuration. Reports are based on TechNet SharePoint 2013 / 2016 Operational best practices, known SharePoint software capacity and limits and other community based best practices.

Help Maintain Maximum Efficiency

The SharePoint Health Check helps you apply knowledge gained from Microsoft best practices. Gaining access to this in-depth expertise can help you reach your highest performance goals.

Help Reduce Support Costs

The SharePoint Health Check will expose vulnerabilities in your SharePoint infrastructure and operational processes. The health check diagnostics reveal the causes of problems, not just the symptoms, helping you to take a proactive approach in addressing the problems. This proactive approach can help optimize productivity and uncover potential risks before they affect users and drive up support costs.

Use Practical Recommendations

The SharePoint Health Check provides practical suggestions for each of the identified risks, to assist you in the best operation of an enterprise deployment of SharePoint. These recommendations related to operations, configuration, and architectural issues can help you get the most from your organization's SharePoint deployment.

Maximize the Value of Your SharePoint Investments

The mission of SimplePortals is to help ensure that you get the most out of your SharePoint investments. Whether you are looking to improve your bottom line, enhance productivity, or use SharePoint technologies to realize new business opportunities, SimplePortals is ready to assist. From SharePoint support to strategic consulting, we offer a full range of SharePoint Support services for any stage in your SharePoint lifecycle. A great product like SharePoint is nothing without strategic usage to focus on your company goals. Roadmaps, guidance, best practices, tips, and tricks is what we provide. We know what works for portals, collaboration, knowledge management, and business productivity solutions. We have worked with Microsoft technologies for 24 years and began using SharePoint in version 2001.
